

CHEM 161: General Chemistry I

CHEM 161 is the first course of a two-course sequence designed to meet the one-year requirement of general college chemistry. It covers the basic principles of inorganic chemistry including scientific measurement, one dimensional analysis, atomic structure, chemical bonding, both physical and chemical properties of matter, solution chemistry, thermochemistry, and gas laws.

Credits: 3

Prerequisites: MATH 103 with grade of C or better or higher MATH STEM course or Instructor approval

Recommended Prep: CHEM 151, High School Chemistry
